

Crop	Strain
Vegetable	Nitrogen fixation bacteria Azotobacter Azospirillum Rhizobium Phosphate solubilizing bacteria Bacillus subtilis Pseudomonas fluorescens Potassium – Mobilizing bacteria Pseudomonas sp Bacillus mucilaginous Plant growth promoting bacteria Pseudomonas sp Bacillus sp
Cotton	Nitrogen fixation bacteria Azotobacter chroococcum Azospirillum *Note : cotton is a non legume , so Rhizobium is not used ☹ Phosphate solubilizing bacteria Bacillus subtilis Pseudomonas sp Potassium Mobilizing bacteria Bacillus mucilaginous

	Zinc solubilizing bacteria Bacillus spp
--	---

Sugarcane	Nitrogen fixation bacteria (Highest Nitrogen demanding crop) 1. Azotobacter -chroococcum 2. Azospirillum brasilense Potassium Mobilizing bacteria Bacillus mucilaginous Bacillus sp Phosphate solubilizing bacteria Pseudomonas fluorescens Bacillus subtitles Zinc solubilizing bacteria Bacillus spp Plant growth promoting Pseudomonas fluorescens
Maize	Nitrogen fixation bacteria (Highest Nitrogen, phosphate and zinc) Azospirillum brasilense Azotobacter chroococcum Phosphate solubilizing bacteria Bacillus subtitles

	Pseudomonas fluorescens pseudomonas sp Potassium Mobilizing bacteria Bacillus mucilaginous Bacillus sp Zinc solubilizing bacteria Bacillus spp Pseudomonas spp Plant growth promoting Pseudomonas fluorescens
Sunflower	*Note: High demand for nitrogen, phosphorus, potassium, sulphur Nitrogen fixation bacteria Azospirillum brasilense Azotobacter chroococcum Bacillus subtilis Phosphate solubilizing bacteria Pseudomonas fluorescens Bacillus subtilis Potassium Mobilizing bacteria Bacillus mucilaginous Sulphur solubilizing bacteria Thiobacillus thiooxidans Zinc solubilizing bacteria Bacillus spp Pseudomonas spp

	Plant growth promoting bacteria <i>Pseudomonas fluorescens</i>
--	--

Groundnut	*Note :Groundnut is a legume plant so it is required rhizobium bacteria. Nitrogen fixation bacteria <i>Rhizobium spp</i> <i>Azospirillum brasilense</i> <i>Azotobacter chroococcum</i> Phosphate solubilizing bacteria <i>Pseudomonas fluorescens</i> <i>Bacillus subtilis</i> Potassium Mobilizing bacteria <i>Bacillus spp</i> Sulphur oxidising bacteria <i>Thiobacillus thiooxidans</i> Zinc solubilizing bacteria <i>Bacillus spp</i> <i>Pseudomonas spp</i> Calcium solubilizing bacteria <i>Bacillus subtilis</i> <i>Pseudomonas spp</i> Plant growth promoting bacteria
------------------	---

	Pseudomonas fluorescens
Coffee	*Note: Coffee plant grow in acidic hilly soil. It has high demand for nitrogen, phosphorus, potassium, magnesium . Nitrogen fixation bacteria Azospirillum brasilense Azotobacter chroococcum Phosphate solubilizing bacteria Pseudomonas fluorescens Bacillus subtilis Potassium Mobilizing bacteria Bacillus mucilaginous Magnesium solubilizing bacteria Bacillus subtilis Pseudomonas spp Zinc solubilizing bacteria Bacillus spp Pseudomonas spp Sulphur oxidizing bacteria *Note: Sulphur is important for coffee bean aroma compound. Thiobacillus thiooxidans Plant growth promoting bacteria

	Pseudomonas fluorescens Bacillus amyloliquefaciens
Cereal	Nitrogen fixation bacteria Azotobacter chroococcum Azospirillum brasilense Phosphate solubilizing bacteria Pseudomonas fluorescens Bacillus subtilis Potassium Mobilizing bacteria Bacillus mucilaginous Zinc solubilizing bacteria Pseudomonas spp

Tobacco	Nitrogen fixation bacteria Azospirillum brasilense Azotobacter chroococcum Phosphate solubilizing bacteria Pseudomonas fluorescens Bacillus subtilis Potassium Mobilizing bacteria Bacillus mucilaginous
----------------	--

	Sulphur oxidising bacteria (for aroma) Thiobacillus thiooxidans
Sisal	Nitrogen fixation bacteria Azospirillum brasilense Azotobacter chroococcum Phosphate solubilizing bacteria Pseudomonas fluorescens Potassium Mobilizing bacteria Bacillus mucilaginous Stress tolerance enhancer Bacillus subtilis
